DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 06 September 2007 has been entered.

Information Disclosure Statement

The Information Disclosure Statement filed 06 September 2007 has been reviewed and made of record. With respect to the most similar cited prior art, Barak et al. teaches a power amplifier comprising an outphasing system operative to control the variable phase and the amplitude of the input signal in order to achieve high efficiency at low desired output powers. However the claim language of the independent claims of the current application teach an RF power amplifier comprising an *outphasing modulator* with further identification of the functional elements of the outphasing modulator.

Allowable Subject Matter

Claims 4-8 and 11-27 are allowed. The following is a statement of reasons for the indication of allowable subject matter: The prior art made of record teaches various methods of a RF power amplifier that includes an outphasing system to achieve high efficiency but does not teach an RF power amplifier comprising an outphasing modulator with respect to the claimed elements.

As to claim 4, the prior art made of record does not teach an outphasing modulator comprising multiplying a first and second phase shifted signal by a respective first and second amplitude modulation signal with a first and second scaling factor and generating outphased modulated signals from the first and second phase shifted modulated signals.

As to claim 8, the prior art made of record does not teach setting a scaling factor once per command to set an average output power of output signals of a power amplifier, said output signals generated by amplifying outphased modulated signals by said power amplifier and said outphased modulated signals generated from said phase shifted modulated signals.

As to claims 17, 21 and 24, the prior art made of record does not teach an outphasing modulator comprising a multiplier to multiply an amplitude modulation signal by a phase modulated carrier signal to generate a modulated signal and a phase splitter coupled to the multiplier to generate phase shifted modulated signals.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure includes: Kolanek (US 6,633,200) and Gu (US 6,737,914).
